

**In the Specification:**

Please amend the paragraph beginning on page 6, line 25 as follows:

Illustrated in FIG. 1B, a computer software system 150 is provided for directing the operation of the computer system 100. Software system 150, which is stored in system memory 102 and on disk memory 107, includes a kernel or operating system 151 and a shell or interface 153. One or more application programs, such as application software 152, may be "loaded" (i.e., transferred from storage 107 into memory 102) for execution by the central processor 101 of the system 100. The system 100 receives user commands and data through user interface 153; these inputs may then be acted upon by the system 100 in accordance with instructions from operating module 151 and/or application module 152. The interface 153, which is preferably a graphical user interface (GUI), also serves to display results, whereupon the user may supply additional inputs or terminate the session. In a preferred embodiment, operating system 151 and interface 153 are Microsoft Win95, available from Microsoft Corporation of Redmond, Wash. Application module 152, on the other hand, includes a spreadsheet notebook of the present invention as described in further detail herein below.

Please amend the paragraph beginning on page 13, line 28 as follows:

**Container rows** :a container row is a spreadsheet object belonging to a RSTI, and corresponding to the range of cells containing the STI's which are structured according to the definition of a RE or of a RME part of the RST that the RSTI abides by. The number of rows of a container row is equal to the number of rows of the highest STI it contains. A container row can also be referred

to as a recursive element instance (REI). A container row can be seen within a RSTI as equivalent to an element within a STI.
